Please remove index and retain with your 1982 issues

INDEX TO PRODUCTION ENGINEER Vol 61 1982

Subject index

1982—the year of the FMS **Feb p33**
3D machining: From CAD straight to 3D machining **Nov p14**
Taking the mystery out of programming **Oct p22**

A

Abrasive cutting: Why grinding has become 'abrasive cutting' **May p45**
ACARD: "Better standards can improve our competitiveness" **Sept p42**
ACARD report; What the ACARD reports says **Sept p43**
Accounts: Annual Report and Accounts **Jan p38**
Adhesives: getting to know what adhesives can do—it should start at school **Feb p55**
Advanced machining processes—how they rate **May p35**
Agents as rebuilders **Jul/Aug p24**
AGVs could benefit FMS **Sept p34**
AGVs: Wiring up to automation **Sept p34**
Air knife, The—cutting down on drying costs **Feb p19**
All-in-one flexible turning cell for bar and chucking work, The **Jul/Aug p37**
Amchem—aiming to widen EDM applications **Oct p49**
Annual Dinner speeches:
Government stops industry from being efficient (Dr Lickley) **Jan p56**
"We engineers have not failed the nation" (Viscount Caldecote) **Jan p57**
Annual Report and Accounts 1980-1981 **Jan p32**
Applying FMS around the world **Dec p17**
Assembly and flexibility join forces **May p38**
Assembly:
Designing for easy assembly **Dec p11**
Hexagonal conveyor system aids flexible assembly **Dec p30**
Limit an assembly robot's dexterity and increase its flexibility! **Oct p18**
'Nelson'—the vision system for robots **Feb p42**
ASP: 1982—the year of the FMS **Feb p33**
'Nelson'—the vision system for robots **Feb p42**
Automate in stages—and begin now **Oct p29**
Automated assembly—how to make it work in practice **Nov p31**
Automated assembly: Xerox moves into automated assembly with £3m system **Sept p22**
Automated handling can cut costs **Sept p25**
Automated high density store speeds tool retrieval **Sept p31**
Automated inspection and control (Conference) **June p23-6**

B

Babcock's mammoth task—how it was achieved **Mar p25**
Babcock way to higher productivity, The **Jan p29**
Batch production: Managing the batch production shop—it's all a question of 'architecture' **Jul/Aug p47**
Battery grid handling **Sept p29**
Better mould cooling with a leakstopper **Jun p47**
"Better standards can improve our competitiveness" **Sept p42**
Bringing the benefits of CAD/CAM to small companies **Oct p28**
Britain's engineers are frightened of the laser! **Apr p27**

C

CAD:
From CAD straight to 3D machining **Nov p14**
"Install CAD/CAM and zap up your profits by 10%!" **May p27**
CAD/CAM:
Bringing the benefits of CAD/CAM to small companies **Oct p28**
Government aid for CAD/CAM **Oct p30**
How much does industry know about CAD/CAM? **Oct p30**
How production can benefit from CAD/CAM **Jan p62**
IDEMS links design and manufacture **May p29**
"Install CAD/CAM and zap up your profits by 10%!" **May p27**
Kongsberg's low cost CAD/CAM **May p28**
CAD/CAM—it can take 10 years to assimilate it into your company **Dec p19**
CAE panel: 1982—the year of the FMS **Feb p33**
Calibrating on the shopfloor **Nov p39**
CAM: Managing the batch production shop by computer—it's all a question of 'architecture' **Jul/Aug p47**
CAMPRO: How production can benefit from CAD/CAM **Jan p62**
Carbide tooling: Make your own carbide tooling with DIY 'kit' **Apr p43**
Casting:
A better route to forging-die production? **Oct p42**
How flowforming can compete with pressing, casting and machining **May p15**
Research aims to take the guesswork out of sand casting **Nov p43**
Rotary forming replaces casting **May p23**
Choice between robots and dedicated mechanisms for loading machine tools, The **Jul/Aug p33**
CNC machines: GEC now offers an all-British electrical package for CNC machines **May p31**
CNC: the all-in-one flexible turning cell for bar and chucking work **July/Aug p37**
How CNC increases profits and creates new orders **Jun p49**
"Communication is essential" (E T Treywin) **June p23**
Computers:
How Land Rover builds its engines with almost complete computer control **Apr p18**

How Lucas uses a computer bureau to ease work measurement **Nov p20**
Managing the batch production shop by computer—it's all a question of 'architecture' **Jul/Aug p47**
Computer programming: Programming micros—it's easier than you think **Apr p34**
Computerised PCB production—Avery weighs up the advantages **June p13**
Consultancy: Keeping productivity high at TI **Mar p15**
Conveyors: Hexagonal conveyor system aids flexible assembly **Dec p30**
Crankcases: Diesel engine crankcases go FMS at Gardner's **Sept p15**
Cutting:
Making lasers pay the Eminox way **Mar p31**
Measuring cutting conditions—the eyes don't have it! **Sept p46**
Cutting fluids: Pasteurisation extends cutting fluid life—but in vain? **Jul/Aug p37**

D

Dedicated mechanisms: the choice between robots and dedicated mechanisms for loading machine tools **Jul/Aug p33**
Design: How a change in design creates a better product **Feb p57**
Designing for easy assembly **Dec p11**
Detecting minute faults by laser: **June p23**
Die casting: Don't 'over engineer'. Use die cast zinc! **Sept p55**
Dies: Casting: a better route to forging-die production? **Oct p42**
Die manufacture: EDM projects spearhead government research programme into die and mould manufacture **May p33**
Diesel engine crankcases go FMS at Gardner's **Sept p15**
"Don't buy new if we can rebuild" **Jul/Aug p23**
Don't 'over engineer'. Use die cast zinc! **Sept p55**
Dowty Mining opts for 'integrated manufacturing' to reduce unit costs **Sept p35**
Drying: The air knife—cutting down on drying costs **Feb p19**

E

Economics of engineering, The—lots of risk and not much money **Sept p49**
Education:
Education, Industry and Society (Graham Clark Lecture) **Jun p37**
Plenty of industrial robots—but not enough engineers! **Feb p53**
When education and industry work together **Jan p47**
Mid-career training. A part-time MSc course could be the answer **Jan p55**
NC training—a growing awareness? **Jan p51**
EDM: Amchem—aiming to widen EDM applications **Oct p49**
EDM projects spearhead government research programme into die and mould manufacture **May p33**
Elections for Section and Associate Member Section Committees **Jan p67**
Electronic gauges keep missiles within limits in robot cell **June p16**
Electronic gauging: Unmanned turning cell uses electronic in-cycle gauging **Jan p59**
Electronics: Programming micros—it's easier than you think **Apr p34**
Engineering Council, The: A statement of policy **Nov p56**
Why you should vote to transfer CEI's powers—Sir Robert Telford **Dec p26**
Essay competition:
The production engineer for the year 2000 Ken Stout **Dec p46**
The production engineer—what lies ahead? David Smith **Nov p52**
Extraordinary General Meeting **Oct p50**

F

Facing international competition (ACARD report) **Sept p42**
Facing up to the challenges new technology presents (Leader article) **Sept p3**
Feed blocks: producing feed blocks **Sept p36**
Fibreglass: Making GRP mouldings the mass production way **Feb p23**
Flexible assembly:
Assembly and flexibility join forces **May p38**
Hexagonal conveyor system aids flexible assembly **Dec p30**
Flexible machining: How Lucas Bryce approaches flexible unmanned machining **Oct p13**
Flowforming:
Flowforming doubles hardness **May p23**
"Flowforming gives us the product we want" **May p19**
Hot spinning—a process for mass production **May p21**
How flowforming can compete with pressing, casting and machining **May p15**
How Germany makes train wheels with flowforming **May p25**
Jobbing shops begin to lose their hold on metal spinning **May p14**
Rotary forming replaces casting **May p23**
FMS:
1982—the year of the FMS **Feb p33**
AGVs could benefit FMS (Materials Handling Feature) **Sept p34**
Amchem—aiming to widen EDM applications **Oct p49**
Applying FMS around the world **Dec p17**
Diesel engine crankcases go FMS at Gardner's **Sept p15**
Dowty Mining opts for 'integrated manufacturing' to reduce unit costs **Sept p35**
FMS demands 100% reliability **Jul/Aug p36**
"FMS is not just for the big boys" **Sept p28**
FMS plans at British Aerospace **Mar p18**
FMS problems "solved by new machining cell" **Oct p43**
From average workshop to FMS **Sept p47**
How to justify installing FMS **Apr p30**
KIMS gets RCI for FMS **Feb p39**
Laser-Check—the gauging system 'ideal for FMS' **Nov p38**
Measuring cutting conditions—the eyes don't have it! **Sept p46**
UK wants modular systems but not flexible manufacturing systems, yet **Jul/Aug p46**
What should be considered when evaluating FMS **Dec p15**
Ford's Sierra project doubles UK robot count **Nov p33**
Form and texture: measuring curved surfaces in one go **June p20**
From average workshop to FMS **Sept p47**
From CAD straight to 3D machining **Nov p14**

G

Gauges: Electronic gauges keep missiles within limits in robot cell **June p16**
Gauging: Laser-Check—the gauging system 'ideal for FMS' **Nov p38**
Getting the right pieces in the right place—and at the right time **Sept p18**
Getting to know what adhesives can do—it should start at school **Feb p55**
Government stops industry from being efficient: Dr Robert Lickley (Annual Dinner speech) **Jan p56**
Grinding: Why grinding has become 'abrasive cutting' **May p45**
GRP: Making GRP mouldings the mass production way **Feb p19**

H

Hardening: Ion implantation. The key to longer tool life **Jul/Aug p15**
Heavy machines: The Babcock way to higher productivity **Jan p29**
Hexagonal conveyor system aids flexible assembly **Dec p30**
Home-made inspection software **Jun p25**
Hot isostatic pressing: Making tools by powder compaction—HIP leads the way **May p42**
Hot spinning—a process for mass production **May p21**
How £1m presses doubled turnover at Tallent **Dec p34**
How a change in design creates a better product **Feb p57**
How CNC increases profits and creates now orders **Jun p49**
How flowforming can compete with pressing, casting and machining **May p15**
How Germany makes train wheels with flowforming **May p25**
How industry uses incentive payment schemes **Apr p39**
How Land Rover builds its engines with almost complete computer control **April p18**
How Lucas Bryce approaches flexible unmanned machining **Oct p13**
How Lucas uses a computer bureau to ease work measurement **Nov p20**
How much does industry know about CAD/CAM? **Oct p30**
How production can benefit from CAD/CAM **Jan p63**
How to justify installing FMS **Apr p30**

I

IDEF: Managing the batch production shop by computer—it's all a question of 'architecture' **Jul/Aug p47**
IDEMS links design and manufacture **May p29**
Incentive payment schemes: How industry uses incentive payment schemes **Apr p39**
Injection moulding used to produce powder metal parts **Oct p39**
Injection moulding: RRIM—a moulding process in danger of stagnating? **Apr p23**
Better mould cooling with a leekstopper **Jun p47**
Integrated manufacturing: Dowty Mining opts for 'integrated manufacturing' to reduce unit costs **Sept p35**
IProdE launches 5-day course in applied robotics **Jul/Aug p44**
Inspection:
Laser-Check—the gauging system 'ideal for FMS' **Nov p38**
New inspection system from US **Nov p40**
Inspection and metrology Feature:
Detecting minute faults by laser **June p23**
Electronic gauges keep missiles within limits in robot cell **June p16**
Form and texture: measuring curved surfaces in one go **June p20**
Home-made inspection software **Jun p25**
PAG – between the gauge and the measuring machine **Jun p32**
Quick way to calibrate co-ordinate measuring machines **Jun p28**
"Install CAD/CAM and zap up your profits by 10%!" **May p27**
Ion implantation. The key to longer tool life. **Jul/Aug p15**

J

Jigs: Universal tooling cuts jig and fixture production costs **Dec p27**
Jobbing shops begin to lose their hold on metal spinning **May p14**

K

Keeping productivity high at TI **Mar p15**
KIMS gets RCI for FMS **Feb p39**
Kongsberg's low cost CAD/CAM **May p28**

L

Lasers:
- Britain's engineers are frightened of the laser! **Apr p27**
- Calibrating on the shopfloor **Nov p39**
- Form and texture: measuring curved surfaces in one go **June p20**
- Laser-Check—the gauging system 'ideal for FMS' **Nov p38**
- Lasers extend subcontractor's capabilities **Sept p40**
- Making lasers pay the Eminox way **Mar p31**
- New inspection system from US **Nov p40**
- Reducing tooling costs with a Laser Centre **Sept p53**

Lathes:
- Retrofit for Colchesters **Jul/Aug p19**
- Total re-design package **Jul/Aug p19**

Leakstopper: Bett:r mould cooling with a leakstopper **Jun p47**
Learning curves—the simpler the better **Mar p38**
LEntA: Subcontractors' register **Nov p32**
Limit an assembly robot's dexterity and increase its flexibility! **Oct p18**
Loading: the choice between robots and dedicated mechanisms for loading machine tools **Jul/Aug p33**
Looms: Robot wires looms **Nov p31**

M

Machining:
- Advanced machining processes—how they rate **May p35**
- How flowforming can compete with pressing, casting and machining **May p15**

Machining cells:
- Electronic gauges keep missiles within limits in robot cell **June p16**
- FMS problems "solved by new machining cell" **Oct p43**
- Robot operates unmanned machining cell **Jul/Aug p33**

Maho—investing and rationalising to beat the recession **Dec p31**
Make your own carbide tooling with DIY 'kit' **Apr p43**
Making a micro control your production **Dec p40**
Making lasers pay the Eminox way **Mar p31**
Making production control less of an afterthought **Dec p43**
Making swarf handling pay its way **Sept p19**
Managing the batch production shop by computer—it's all a question of 'architecture' **Jul/Aug p47**
Manufacturing Matters: Synopses of PEP 82 Conference papers **Mar p57**
Materials Handling Feature:
- AGVs could benefit FMS **Sept p34**
- Automated handling can cut costs **Sept p25**
- Automated high density store speeds tool retrieval **Sept p31**
- Battery grid handling **Sept p29**
- "FMS is not just for the big boys" **Sept p28**
- Getting the right pieces in the right place—and at the right time **Sept p18**
- Making swarf handling pay its way **Sept p19**
- Storing and sawing bar automatically **Sept p23**
- Wiring up to automation **Sept p34**
- Xerox moves into automated assembly with £3m system **Sept p22**

Measuring cutting conditions—the eyes don't have it! **Sept p46**
Measuring:
- Calibrating on the shopfloor **Nov p39**
- Measuring: Form and texture: measuring curved surfaces in one go **June p20**
- Laser-Check—the gauging system 'ideal for FMS' **Nov p38**

Mechanical plating starts to take over from electroplating **Jun p39**
Metal spinning: Jobbing shops begin to lose their hold on metal spinning **May p14**
Metrology and Inspection Feature: June *see* Inspection and Metrology Feature
Micros: Making a micro control your production **Dec p40**
- Programming micros—it's easier than you think **Apr p34**

Mid-career training. A part-time MSc course could be the answer **Jan p55**
Missiles: electronic gauges keep missiles within limits in robot cell **June p16**
Modular systems: UK wants modular systems but not flexible manufacturing systems, yet **Jul/Aug p46**
Monitoring:
- Tool Sense cuts down on machine tool downtime **Oct p34**
- Why car companies are looking at programmable tags **Nov p48**
- Why production engineers should look at cows! **Oct p45**

Mould manufacture: EDM projects spearhead government research programme into die and mould manufacture **May p33**
Moulding:
- Better mould cooling with a leakstopper **Jun p47**
- Injection moulding used to produce powder metal parts **Oct p39**
- Making GRP mouldings the mass production way **Feb p23**
- RRIM—a moulding process in danger of stagnating? **Apr p23**

N

NC training—a growing awareness? **Jan p51**
NEL: 'Nelson'—the vision system for robots **Feb p42**
'Nelson'—the vision system for robots **Feb p42**
New inspection system from US **Nov p40**
NOMAD: What is NOMAD? **Nov p22**

P

PAG—between the gauge and the measuring machine **Jun p32**
Painting robots halve cycle times for subcontractor **May p50**
Pasteurisation extends cutting fluid life—but in vain? **Jul/Aug p42**
Plenty of industrial robots—but not enough engineers! **Feb p53**
Powder compaction: Making tools by powder compaction—HIP leads the way **May p42**
Powder metal: Injection moulding used to produce powder metal parts **Oct p39**
Presses: How £1m presses doubled turnover at Tallent **Dec p34**
Pressing: How flowforming can compete with pressing, casting and maching **May p15**
Principal Officers 1982/83 **Jul/Aug p50**
Printed circuit boards: Computerised PCB production—Avery weighs up the advantages **June p13**
Producing feed blocks **Sept p36**
Production cells: FMS plans at British Aerospace **Mar p18**
Production control:
- Making a micro control your production **Dec p40**
- Making production control less of an afterthought **Dec p43**
- Why computerised production control systems continue to disappoint **Dec p37**

Programmable tags:
- Why car companies are looking at programmable tags **Nov p48**
- Why production engineers should look at cows! **Oct p45**

Programming micros—it's easier than you think **Apr p34**
Programming: Taking the mystery out of programming **Oct p22**

R

Recession gives retrofit a boost **Jul/Aug p29**
Reducing tooling costs with a Laser Centre **Sept p53**
Remote Control Interface: KIMS gets RCI for FMS **Feb p39**
Research aims to take the guesswork out of sand casting **Nov p43**
Resin injection: Making GRP mouldings the mass production way **Feb p23**
Retrofit and Rebuild Feature:
- A booming market **Jul/Aug p24**
- Agents as rebuilders **Jul/Aug p24**
- "Don't buy new if we can rebuild" **Jul/Aug p23**
- Recession gives retrofit a boost **Jul/Aug p29**
- Retrofit for Colchesters **Jul/Aug p19**
- Retrofit is no longer viable for small production machines **Jul/Aug p18**
- Total re-design package **Jul/Aug p19**
- Transfer lines can be rebuilt to give flexibility **Jul/Aug p27**
- Updating the Max-E-Trace 65 **Jul/Aug p29**

Retrofit is no longer viable for small production machines **Jul/Aug p18**
Retrofit for Colchesters **Jul/Aug p19**
Robots:
- Choice between robots and dedicated mechanisms for loading machine tools, The **Jul/Aug p33**
- Electronic gauges keep missiles within limits in robot cell **June p16**
- Ford's Sierra project doubles UK robot count **Nov p33**
- Limit an assembly robot's dexterity and increase its flexibility! **Oct p18**
- 'Nelson'—the vision system for robots **Feb p42**
- Painting robots have cycle times for subcontractor **May p50**
- Robot operates unmanned machining cell **Jul/Aug p33**
- Robot wires looms **Nov p31**
- Robots in the US—how they will affect industry **Dec p22**
- Robot research: What's happening in the UK **Jun p50**
- Plenty of industrial robots but not enough engineers! **Feb p53**
- Robot operates unmanned machining cell **Jul/Aug p33**
- Why robots? What about the *other* option to manual assembling! **Jun p34**

Robotics: IProdE launches 5-day robotics course **Jul/Aug p44**
Rotary forming replaces casting **May p23**
RRIM—a moulding process in danger of stagnating? **Apr p23**

S

Sand casting: Research aims to take the guesswork out of sand casting **Nov p43**
Sawing: Storing and sawing bar automatically **Sept p23**
Scotland's major engineering show approaches **Nov p37**
Scottish Engineering Show: Scotland's major engineering show approaches **Nov p37**
Section Elections: Elections for Section and Associate Member Section Committees **Jan p67**
Sensors: Measuring cutting conditions **Sept p46**
Shopfloor CATS can improve productivity **Nov p29**
Sierra: How £1m presses doubled turnover at Tallent **Dec p34**
Spinning: Hot spinning—a process for mass production **May p21**
Stitch in time, A: **Jan p65**
Stitch-folding gun: A stitch in time **Jan p65**
Storing and sawing bar automatically **Sept p29**
Subcontractors' register **Nov p32**
Surface hardening: Ion implantation. The key to longer tool life **Jul/Aug p15**
Swarf: Making swarf handling pay its way **Sept p19**

T
